

Unlocking Procedure for K3571 Modem for Mac Users

Before you get started, please make sure you have the following:

1. Your current K3571 modem working correctly in your Mac
2. The necessary Unlocking code is available (as provided from Vodafone for your specific modem IMEI number).
3. The executable unlocking tool plus your Non-Vodafone SIM Card.

There are 3 steps necessary to unlock the modem:

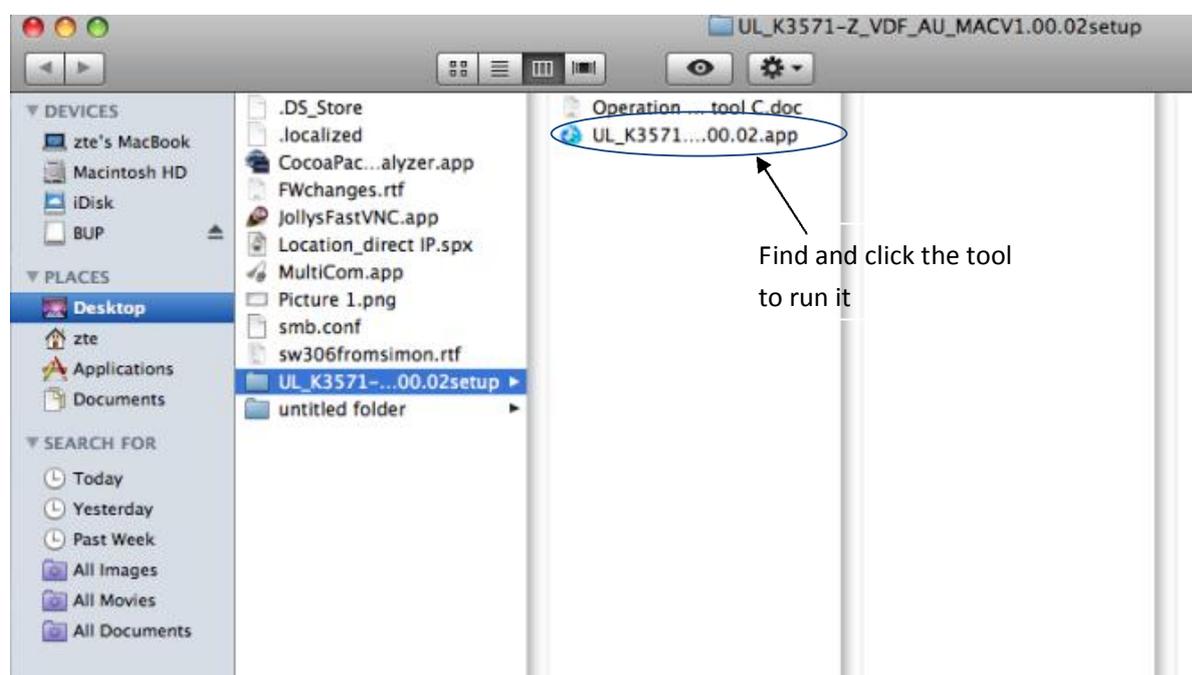

Step1: Run the executable unlocking tool.

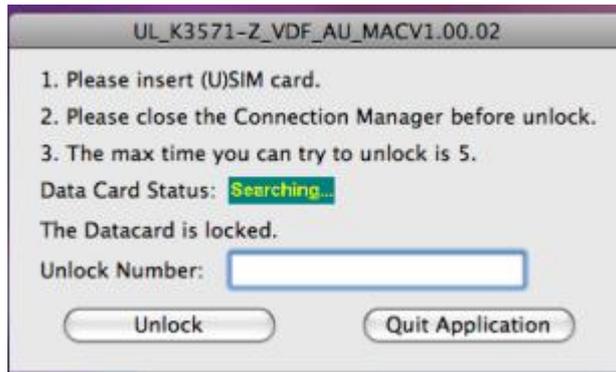

Step2: Plug in the K3571 modem into the Mac with the **Non**-Vodafone SIM inserted into the modem.

Step3: Input the unlocking code.

Please follow the steps below:

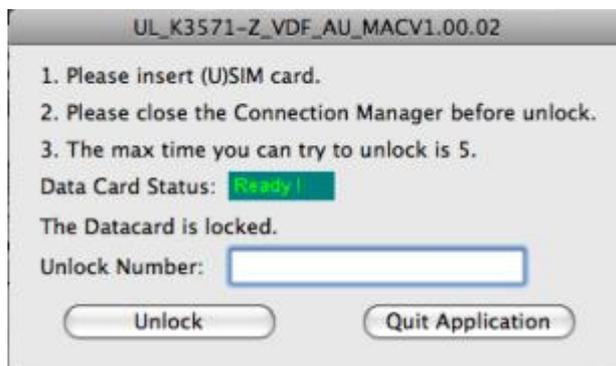

Step 1: Un-ZIP the unlocking tool file (executable unlocking tool is Zipped) on your MAC. Then run the executable unlocking tool. See pic 1 & 2 below:

Pic 2

Step 2: Insert the K3571 modem into the PC and the unlocking tool will detect the modem automatically (See Pic 3). **In this Step, make sure you insert a Non Vodafone SIM in the modem.**

Step 3: Input the unlocking code. (See Pic 4)

Pic 4

Please note that you only have **5 chances** to input the unlocking code correctly and if you input the incorrect code more than 5 times, the modem will be locked permanently.

Once you have successfully unlocked the modem, the following will be displayed as per Pic 5 below:
