Welcome

Your new Vodafone Mobile Broadband USB Modem connects your computer to the internet over the Vodafone mobile phone network. The Vodafone QuickStart technology built into the device lets you connect quickly, simply and easily.

Browse the web
You can now access the web and any other internet service wherever there’s a mobile phone network.

Pick up emails
Keep up to date with your emails, wherever you are.

Send and receive SMS text messages
You can send and receive SMS text messages straight from your computer. The SMS application provides an easy way to view messages, write new ones, and manage them.

System Requirements
To use this USB Modem and the Vodafone Mobile Broadband application, you need:

– A computer running Microsoft® Windows® 8, Windows® 7 (SP1 recommended), Windows Vista™ (SP2 recommended), or Windows® XP (SP3 recommended), or an Apple Mac running Mac OS® X 10.5 (Intel®), 10.6, 10.7 or 10.8 (all with latest updates).

– A USB socket.

– Administrator rights on your computer.
Set up your USB Modem

Step 1
Slide the front cover off the USB Modem and insert your SIM and Micro SD card (sold separately) as shown.

Step 2
Important. If you have an earlier version of the VMB software on your computer, you must un-install the VMB software completely and re-boot your PC before inserting this USB Modem.

Step 3
Plug the USB Modem firmly into your computer’s USB port. You should see a progress bar whilst the Vodafone Mobile Broadband service is installed on your computer from the USB Modem. Once setup is complete, the Vodafone Mobile Broadband application is started automatically, and you are connected to the Vodafone network (if a PIN is required you will see a popup screen requesting it before you can connect). The LED on the USB Modem will change from flashing to solid, and you will see 2 popup screens.

Note: Some computers may be set up to prevent automatic installation of the VMB Lite service from your USB Modem. In this case, follow the steps in the hints and tips section to manually install the VMB Lite service on your computer.

On a Windows 8 PC the user experience is slightly different. This is explained on the next page.
On a Windows 8 PC the Mobile Broadband user experience is slightly different as the mobile network connectivity is managed within the Windows 8 operating system. When you plug in the USB Modem, you need to open the ‘charms’ (Search, Share, Start, Device and Settings), and select **Settings > Networks (or Your Wi-Fi Network Name) > Mobile Broadband**.

Select **Connect Automatically** if required, then click **Connect**. Initially the Connection Manager will show ‘Get recommended app’ and this will change to ‘View my account’ when the Mobile Broadband application has been automatically downloaded by Windows 8.

**Note:**
The Mobile Broadband application can be launched by selecting the application Tile or View My Account Link in the Networks area of the Settings charm.
Connection window

1. **Connect/Disconnect**
   Connect to the internet via the mobile phone network or Wi-Fi, to browse the web or use email

2. **Status**
   Check the status of the current connection

3. **Shortcuts**
   Select services, applications and tools

4. **Menu bar**
   Device and network settings and diagnostics, SMS functionality, manage your account.

5. **Help**
   View Help topics

6. **Always Best Connected**
   Configure connection preferences

Note: Once setup is complete, you can always access the Vodafone Mobile Broadband application when your USB Modem is inserted into your computer by clicking the desktop icon.
QuickStart window layout

1. Navigation tabs – Select QuickStart, SMS or Account view
2. Navigation bar – Select an area within each view
3. Current network panel – Status of mobile broadband network connection
4. Content area – Content for current area
5. Context help – Context-sensitive help for current area (scroll down)
6. Language selection – Defaults to browser language

Note: Every window in the QuickStart application has this same standard layout. Context-sensitive help for each window is always available at the bottom of the window. Sometimes an additional Menu bar will appear on the left of the window.

In the QuickStart view Settings area you can:
- Set options for automatic connection to the mobile network
- Specify the SIM PIN number (if required by your network)
- Set other options via the Menu bar on the left-hand side of the window.
QuickStart view: Current network panel

The Current network panel appears on the right-hand side of every screen within the QuickStart application. ‘Roaming network’ is displayed when you are roaming on another operator’s network, or ‘Home network’.

**Mobile number** – Shown if permitted by your network operator

**Signal** – More bars indicates better mobile broadband network signal

**Status** – Tick when connected to network; Cross when not connected

**Network** – Name and type of currently connected network

**Time connected** – For current connection to network

**Total volume** – Approximate cumulative data usage

**Up / Down** – Approximate connection speed: ‘Up’ to the network from your computer, and ‘Down’ from the network

Note: Whenever you insert your USB Modem into your computer you are connected to the mobile network.

Automatic network connection can be disabled from the Settings area in the QuickStart view.

The QuickStart application can also be accessed from the Vodafone Mobile Broadband desktop icon.
SMS view

The SMS view has six options on the Navigation bar covering all messaging functions: Inbox, Write, Sent, Draft, Settings and Help.

Note: When you select the checkbox in the title bar of the Inbox, Sent folder or Draft folder, all messages in that folder are selected. This is useful if you want to delete multiple messages. It is not possible to forward multiple messages.

In the Settings area you can select or de-select the SMS preview in the QuickStart view.
The Account view has three options on the Navigation bar: Account details, Account type and Help. For prepaid account customers there are two additional options: Balance and TopUp.

For prepaid accounts, the Balance area shows your current account balance. Click the Refresh button to update the balance value. The TopUp area allows you to top up a prepaid account balance using either a voucher, or a credit or debit card.

Note: The options that are displayed on the Navigation bar are dependent on the account type selected.
**USB Modem LED lights**

The LED light on your USB Modem shows which kind of mobile network has been found, and whether the USB Modem is connected to that network.

- **Green blinking**
  A GPRS network has been found – you could connect

- **Green solid**
  Connected via GPRS

- **Blue blinking**
  A 3G network has been found – you could connect

- **Blue solid**
  Connected via 3G

- **Light blue solid**
  Connected via 3G Broadband

**Signal strength**

The strength of the mobile or Wi-Fi network signal is shown by the symbol to the left of the Connect button, and by the icon in the Windows Notification area.

The more bars that are filled in, the better the signal quality. At least one bar must be filled in order to connect.
Hints and tips

Install problems on PC with older version of VMB

If you had a problem installing the software (the symptoms could be any of the following):

– a new desktop icon for VMB was not created on your desktop, or

– when you run VMB from the desktop shortcut you do not get a new software splash screen displayed which says “Vodafone Mobile Broadband with QuickStart”, or

– when you insert the device you do not see it appear as a CD ROM device on your computer, or

– when running VMB you receive a “Device Not Detected” message.

The cause of the problem could be an issue with an incomplete un-install of an earlier version of the Vodafone Mobile Broadband software already installed for an older device. This problem may appear on all PCs with Windows operating systems. It should not occur on Apple devices.

Vodafone have developed a clean-up tool to remove the old version of the software correctly, it is available from www.support.vodafone.com/vmb_cleanup.

Download the clean-up tool and unzip the files. After removing the current VMB software (remove using Windows), run the clean-up tool (VmbCleanup.exe) and select all 3 options – Settings, Data and Device Registration. Re-boot your PC and then insert your new USB Modem, and the correct VMB software should install automatically.

Note: The correct software has the “Vodafone Mobile Broadband with QuickStart” splash-screen, and you should be able to access all the functions referenced in this QSG by clicking on the Vodafone Mobile Broadband desktop icon.
Vodafone Mobile Broadband software manual installation

On Microsoft Windows computers

Plug your USB Modem into your computer

– Right-click on the VMB Lite 10.* drive in ‘My Computer’
  (Start menu>Computer on Vista and Windows 7)
– Select ‘Open’ or ‘Explore’
– Double-click the file called setup_vmb_lite.exe on your USB Modem
– You will see a progress bar.

It may take a few minutes to set up your USB Modem, but once setup is complete, the Vodafone Mobile Broadband application will start and automatically connect you to the mobile network. If for some reason the application does not start, select Vodafone Mobile Broadband from the Windows Start menu, or double-click the Vodafone Mobile Broadband desktop icon.

On Mac OS X computers

When you plug your USB Modem in for the first time, a disk named Vodafone Mobile Broadband will popup on your desktop. Double click on the Vodafone Mobile Broadband app to start installation. You will be asked to select your account type during this process. Vodafone Mobile Broadband will start automatically after installation.
The application won’t install on Windows

If the software does not install, or the install progress bar keeps looping

From the Windows Start menu, select
– Settings> Control Panel>System>Hardware>Device Manager
– Expand ‘Universal Serial Bus Controllers’
– Right-click ‘USB Mass Storage Device’ and select ‘Uninstall’
– If your devices are not reloaded, select ‘Scan for Hardware changes’ from the ‘Action’ menu.

Cannot open QuickStart application window

The following things may prevent you from opening the Vodafone QuickStart application window by double-clicking the desktop shortcut:

– Your computer already has a connection via an ethernet LAN cable
– Your computer already has a connection via a Wi-Fi network
– You may be using a VPN (Virtual Private Network).

Unplugging the LAN cable, switching off Wi-Fi on your computer, or exiting your VPN, and then re-inserting the USB Modem, or re-starting the PC may solve the problem.
No network can be found
Change your physical location: in a building, move closer to a window, move higher up, or go outside
– Open the QuickStart application window
– Select the Settings heading on the Navigation bar
– Select the Network entry in the Menu bar on the left
– Click ‘Search’ to search for available networks
– See if you can connect to one of the allowed networks listed
– Click ‘Save’ to save your change
– If you are abroad, contact Support, and check that data services and roaming are enabled on your account.

Re-installing the software
If you want to re-install the software from the USB Modem, you need to first delete the Vodafone Mobile Broadband Service software from your computer.

– From the Windows Start menu, select Settings> Control Panel>Add or Remove Programs (XP) or Programs and Features (Windows 7)
– Run the Vodafone Mobile Broadband Uninstaller
– Re-insert your USB Modem and the software will re-install.
No connection can be opened (1)
– Check the device status (click on desktop shortcut, select the QuickStart tab, Help on Settings bar, and select Diagnostics from the menu). This may indicate the source of the problem.

No connection can be opened (2)
Wait a few minutes and try to connect again. This is most often a temporary problem, especially if an ‘Error 631’ or ‘Error 619’ is referenced. If the problem persists, please call Support.
– Close the application window and then re-open it
– Re-start your computer
– Open the QuickStart application window
– Select the Settings heading on the Navigation bar
– Select the Network entry in the Menu bar on the left
– Check which option is selected. If the option is set to a ‘Preferred’ option, set it to an ‘Only’ option
– Click ‘Save’ to save your change
– If you are using a VPN (Virtual Private Network), contact the administrator of your VPN
– Select the Account tab
– Select the Account type heading in the Navigation bar
– Check that the type of account you have with your mobile network operator is selected in the drop-down menu.
